6 CATEGORY DISPLAYS

204 CATEGORY CARDS

6 DOLLAR-VALUE CARDS

JEOPARDY! MONEY

JEOPARDY! is the unique game where players are given the ANSWERS and must ask the correct QUESTIONS to win. Since you can win or lose money with every question, your money is always in "JEOPARDY!".

OBJECT

Give the correct responses and accumulate the most money in three rounds of play: "JEOPARDY!", "DOUBLE JEOPARDY", and "FINAL JEOPARDY", where you can win the game by outbidding your opponents.

TO SET UP

1. Assemble the 6 Category Displays as illustrated in *Figure 1* on back panel. **NOTE: The "slides" must be inserted first before snapping the frames together.** Fit the frames into the bases as illustrated in *Figure 2* on back panel.

2. Each player takes 1 Category Display, 1 Category Card, 1 Dollar-Value Card, and $500. Place the remainder of the money in the center of the table. **NOTE: While you are setting up, keep your Category Card hidden from the other players.** Each player is "Host" for the JEOPARDY! and DOUBLE JEOPARDY categories on his card. This JEOPARDY! game is designed for up to 6 individual players (each player can host 1 category and play 5). More than six can play in teams. However, as few as 2 can play (each player hosts 2 or 3 categories and plays his opponent's).

3. Each Category Card and Dollar-Value Card has one side for the JEOPARDY! round (blue) and one for the DOUBLE JEOPARDY round (red). Slide the Dollar-Value card into the Category Display with the "JEOPARDY!" side facing your opponents. Then slide the Category Card in front so that the blue "JEOPARDY!" questions and answers are facing you. See *Figure 2* on back panel. The name of your JEOPARDY! category will be facing your opponents. **NOTE: All of the slides should be pulled open.**

HOW TO PLAY THE GAME

1. Choose a player to go first. The first player selects one of his opponent's categories and any one of the dollar values. Generally, the higher the dollar value, the greater the degree of difficulty.

2. The host for the category that has been chosen pushes the slide to close the window of the selected answer and then reads the answer aloud. The first player gives his response (the question to the answer) and the host says whether the player is

correct or not. The player's question does not have to match the correct questions *exactly,* but should have the same general meaning. If the player's response is not in the form of a question, the host should instruct the player to word the response as a question; this prompting will *not* be allowed in the FINAL JEOPARDY round.

3. If the player's response is correct, the player receives from the bank the amount of money indicated on the dollar-value card. If the player's response is not correct, the player forfeits that amount of money to the bank. **NOTE: If a player asks an incorrect question worth more money than he has, the player gives the bank all of his money.** Players cannot have "negative dollar amounts" and cannot borrow money from another player or the bank.

4. If the player's response is not correct, the next player (to his left) has the opportunity to respond to the same answer. That player may pass, choosing not to put his money in jeopardy, or respond and either win or lose the same dollar amount. Play proceeds as above, until the correct response is given or each player has had an opportunity to offer the correct response.

5. If no player responds correctly, the host reads the correct response aloud and the player to the left of the last player up now selects a category.

DAILY DOUBLE

Some of the answers on the Category Cards are indicated as Daily Doubles. Daily Doubles are great opportunities for players with little money to increase their winnings and move ahead of their opponents. When a player selects a dollar-value answer marked Daily Double:

1. The host,—BEFORE he reads the answer—, announces that it's a Daily Double and asks the player who made the selection how much money he wants put into jeopardy.

2. Regardless of the $-value of the question where the Daily Double appears, the player may put *any* amount into jeopardy, *up to the total* amount he has. If he chooses to bet it all and responds correctly, it is a true Daily Double because he will double his winnings with one response. During the JEOPARDY! round, if the player has less than $500 he can declare any amount of money up to $500 to be placed in jeopardy. During the DOUBLE JEOPARDY round if the player has less than $1000, he can declare any amount up to $1000.

3. The Daily Double answer is then read aloud by the host. Only the one player who hit the Daily Double can respond, and that player will either win or lose the amount he placed in jeopardy. (Remember, players will never have less than zero dollars.)

DOUBLE JEOPARDY

After all of the dollar amounts in all 6 categories have been played, the JEOPARDY! round is over and it's time to set up the DOUBLE JEOPARDY round, where the stakes are higher!

1. Each player slides out the Dollar-Value Card and the Category Card from his Category Display. (While you are setting up, keep your Category Card hidden from the other players.) Now, slide the Dollar-Value card into the display with the DOUBLE JEOPARDY side facing your opponents and the Category Card behind it with the red DOUBLE JEOPARDY answers and questions facing you. The name of your DOUBLE JEOPARDY category will be facing your opponents. All of the slides should be pulled open.

2. In DOUBLE JEOPARDY, the player with the least amount of money goes first.

3. Follow the rules as before until all of the dollar amounts in all of the categories have been played. The DOUBLE JEOPARDY round is now over.

FINAL JEOPARDY

Only those players who have money after the DOUBLE JEOPARDY round can compete in FINAL JEOPARDY. A player with no money or the player with the least amount of money is the host for the FINAL JEOPARDY round—the last chance for players to increase their winnings.

1. The host for FINAL JEOPARDY draws the next Category Card from the deck and announces the name of the category from the DOUBLE JEOPARDY side of the card.
2. Each player decides how much money he wants to place into jeopardy, from the minimum of $100 to a maximum equal to the amount of money he has won so far. Players will either increase or decrease their winnings by the amount of money they have in jeopardy. Players write the amount of their wager on a piece of paper and place the paper face down in front of them.
3. The host reads aloud the $1000 answer from the DOUBLE JEOPARDY side of his Category Card.
4. On another piece of paper, players write the question they think is correct.
5. When all players have finished writing, the host reads each player's question aloud, and then reads the correct question. **NOTE: In FINAL JEOPARDY, the players' written responses must be in the form of a question.**
6. The players then reveal how much money they have placed in jeopardy. Players with the correct question receive the amount of money they have placed in jeopardy: players who do not have the correct question forfeit the amount of money in jeopardy.

WINNING THE GAME

Players count their money and the player with the most money wins the game.
